## BACHELOR'S STUDENT IN GLOBAL BUSINESS ENGINEERING

### PROFILE

Interested and dedicated Global Business Engineering student specializing in software engineering, data analysis, and project management at VIA University College. My experience is supported by strong technical principles, data analytics, and project management methodologies, demonstrating problem-solving skills fueled by a passion for creating value in delivered solutions. I have academic knowledge of agile methodologies, stakeholder management, and teamwork, along with practical experience from various projects, preparing me well for real-world work scenarios. Having lived abroad, I have developed an international perspective that allows me to work effectively in multicultural and dynamic environments. I look forward to becoming part of an organization where I can apply my technical and managerial skills, deepen my knowledge in data management, and transform data into actionable insights while contributing to successful project outcomes.

### EDUCATION

#### Bachelor's Student in Global Business Engineering

##### VIA University College

August 2021 - January 2026

Studying engineering, project management, and data-driven business strategy, with a focus on software engineering and data analytics, applied through hands-on, multicultural projects.

- Technical & Analytical Skills: Built data-driven solutions with Java, JavaScript, HTML, CSS, and SQL, using Python and Power BI for data analysis and actionable insights.
- Data Gathering & Strategic Analysis: Skilled in data collection, survey design, and data warehousing, performing macro and micro-analyses to support strategic decisions.
- Business & Marketing Insight: Applied business strategy to tech projects, contributing to marketing plans and industry-aligned solutions.
- Project Management & Collaboration: Participated in project planning and stakeholder communication, enhancing teamwork, leadership, and problem-solving in diverse teams.

Program Highlights:

- Front-end and back-end development across programming languages and frameworks.
- Comprehensive training in data analytics, data gathering, ERP systems, and UX/UI.
- Strong foundation in economics, marketing, and user research, bridging technical and business expertise.
